Simoco Telecommunications (South Asia) Limited, is a dynamic force in radio communications, providing a complete range of high-performance products and added value services. Simoco has a successful track record of innovation and quality stretching back to more than 50 year , in radio communication planning for local authorities, police, military, fire and ambulance, utility companies, public and private transport, business user and security services. The company is poised o develop its reputation as a leading authority in providing complete communication solutions. Simoco has sales, service, research and manufacturing operations to meet the growing requirements of the entire world, with a particular focus for South Asian regions. The company is committed to best industry accepted standards and has invested heavily in research and developments to ensure that our customers benefit from world-class solutions.

The power to deliver in LIFE

Simoco has the skills and resources to deliver a complete network solution from a single source. The services include:

- Consultancy
- Planning
- Infrastructure
- Propagation
- System engineering
- Supply and installation
- Configuration and commissioning
- Billing and revenues capture
- Service and maintenance
- Project management
- Marketing and market development
- Customer support and helpdesk
- Training
- Skills transfer

Electricity

Our way of life today depends on a ready supply of electrical power nationwide. A series of disciplines from production through transport and storage to the individual subscriber connection must work in the closest coordination to fulfill a public service mission, which will accept no failure.

Confined Space Communication

Underground tunnels are vital links in modern transportation networks. In everyday operation, good radio communications allow responsive control of tunnel maintenance and operational crews and provide information and communication services for the public. In emergency situation, effective communication is a critical factor in ensuring the safety of the public and tunnel staff and in minimizing the impact of traffic flows.

Fleet Management

As a licensed operator, you know that the most important criterion for success is how fast you can get the resources out to the customers. A taxicab without any fare-paying passengers on board is unproductive and unprofitable for both driver and operator. A cargo delivered after the committed time line is more damaging to the company. Effective fleet management can keep you ahead of the competition. The package provided by Simoco with internationally renowned partners goes even further, offering the benefits of a total solution, which can integrate your fleet management, accounting, radio communications and telephone systems.

Fire and Rescue

Fire and rescue services are constantly faced with the unexpected. Any incident – domestic fire, flood, flood relief, accident or disaster, spillage – can rapidly turn into a hazardous and life-threatening situation. Your resources are necessarily limited,

yet you must always be capable of rapid and effective response to save lives and minimize risks. Simoco systems for fire services are designed to perform with total reliability in this demanding role. They provide the means to alert and coordinate your full-time and part-time staff, maintain tight control in rapidly developing situation and deploy your resources as efficiently as possible.

Water Industry

The water industry today operates amid increasingly stringent controls on financial budgets, resulting in much tighter constraints on manpower and plant resources. At the same time, the demand is for improved services and higher quality. In this climate, efficient radio communication systems for voice and data have become an indispensable aid to efficient use of resources.

Transport

The public transport industry today operates in an increasingly competitive environment, in which terminus operators under continual pressure to improve services to customers and optimize their utilization of resources. In this climate, efficient radio communication systems have become an indispensable aid.

Disaster Management

The unpredictability of disasters in regard to their time, location and magnitude has always been a great challenge to mankind. Men have always shown instinct to survive and fight back and various agencies need to be armed with effective communication to provide damage control in event of such eventualities and provide aid and relief to the affected. Simoco provides advanced communications system for rapid deployment and reliable communication to meet the growing needs of users in managing and limiting the affect of unprecedented events.

Military

Full scale coordinated land, air and sea strikes is no longer a war games scenario. Today's battlefield is much more dynamic than ever before and the requirement of secure and effective communication has grown from strategic to tactical. Simoco offers various sub systems and solutions for network centric communication requirements to bind the various nodes involved in coordinating military operations by providing reliable, secure, instant communication circuits.

Infrastructure

The impact of urbanization on our living environment depends very much on the management of urban change by various parties involved in the development process. Telecommunications is proving to be vital factor in sustainable urbanization. Simoco provides communication solutions for agencies involved in planning; development and management of infrastructure by providing a means to effectively utilize and maximize the available resources.

Products :

Conventional

- Handhelds

- HF Communications

- Mobile Fixed Stations

- Repeaters

Systems

- HF Fax & E-mail Systems

- MPT

- Simulcast

- TETRA

Sales & Marketing

Simoco has direct Sales & Marketing presence in 7 major cities in India and through various preferred partners in the world. Major strength and success of Simoco's sales team is from its customer awareness and deep understanding of the practical needs of the market. It offers complete support during pre contract design and discussion phase through to the project handover and post contract support. We ensure that our communications solution meets your requirements in the most competitive manner. Simoco Sales & marketing are well equipped and capable to integrate various sub systems and products and propose the most suitable and competitive solution to meet your special requirements.

Manufacturing

Reliability and superior performance of our products is ensured by high standard of manufacturing and compliance testing of all our products. The company is ISO 9001 and DGQA accredited and employs state of the art production techniques for the manufacture of all its products.

Research & Development

The Company has its own R&D centre for product development and engineering and employs experienced professionals in the field of RF, Mechanical and Software design. The Group is responsible for research of new products, customization and up gradation of current products and joint development activities with other internationally recognized companies for technological tie ups and cooperation.

Quality Assurance

The Quality Assurance is equipped with state of art test and measurement labs to ensure strictest adherence to specifications and product quality of all manufactured products. All QA procedures are fully compliant to ISO 9001 and DGQA certification. The department undertakes various Technical, Environmental and Mechanical tests to ascertain that all products are tested to highest levels of Quality Assurance.

Support & Services

Simoco places a high priority on After Sales Service. The sale of system in the first place is important, but ensuring that the system continues to perform after it is installed, rates higher. Simoco through 3 tiers of service and customer care offers 24/7 support for all its products and installations across the globe.

Installation & Commissioning Services

Simoco has a successful track record in designing, building and implementing network solutions from single site radio systems to complete regional and national networks. Many of our installations provide mobile communications to users in remote regions of the world where other telecommunications media are non-existent.

Customer Training

Training for the correct use and maintenance of the equipment is an essential part of business to ensure the continued functioning of our products/systems as per the requirements. To this end customer training is offered in customer and factory premises.

Project Managements & Systems Integration

Our project teams are drawn from all areas of IT and telecommunications and balance wide-ranging experience with a commitment to innovation. In order to assure the satisfactory completion of a project the Project Management team has a continuous working relationship with the equipment supply centres, third party supplies, installation and commissioning teams and the customer, to ensure full compliance to customer requirements.
